Cybersecurity Statement and Recommendations

Cybersecurity Statement

- You are responsible for the risks resulting from connecting your product to the internet, including but not limited to, cyber-attacks, hacking attacks, computer viruses and malware, etc. Please protect your data and personal information by taking necessary actions, such as changing the default password and using a strong combination, changing your password periodically, keeping your firmware up-to-date, etc. Dahua is not responsible for any dysfunction, information leakage or other problems caused by failure to take necessary precautions to secure your devices. We will provide product maintenance services.
- To the extent not prohibited by applicable laws, Dahua and its employees, licensees, and affiliates are not liable for personal injury, or any incidental, special, indirect, or consequential damages whatsoever, including, without limitation, damages for loss of profits, corruption or loss of data, failure to transmit or receive any data, business interruption, or any other commercial damages or losses arising out of or related to the use or inability to use its products or services, however caused, regardless of the theory of liability (contract, tort or otherwise), even if it has been advised of the possibility of such damages. Some jurisdictions do not allow the exclusion or limitation of liability for personal injury, or of incidental or consequential damages, so this limitation may not apply to you.
- In no event shall liability for all damages (other than as may be required by applicable laws in cases involving personal injury) exceed the amount paid for products or services.

Cybersecurity Recommendations

Mandatory actions to be taken towards cybersecurity

1. Change Passwords and Use Strong Passwords:

The number one reason systems get “hacked” is due to having weak or default passwords. Dahua recommends changing default passwords immediately and choosing a strong password whenever possible. A strong password should be made up of at least 8 characters and a combination of special characters, numbers, and upper and lower case letters.

2. Update Firmware

As is standard procedure in the tech-industry, we recommend keeping NVR, DVR, and IP camera firmware up-to-date to ensure the system is current with the latest security

patches and fixes.

Check the firmware release of your running devices. If the firmware release date is over 18 months old, please contact a Dahua authorized local distributor or Dahua technical support for available update releases.

“Nice to have” recommendations to improve your network security

1. Change Passwords Regularly

Regularly change the credentials to your devices to help ensure that only authorized users are able to access the system.

2. Change Default HTTP and TCP Ports:

- Change default HTTP and TCP ports for Dahua systems. These are the two ports used to communicate and to view video feeds remotely.
- These ports can be changed to any set of numbers between 1025-65535. Avoiding the default ports reduces the risk of outsiders being able to guess which ports you are using.

3. Enable HTTPS/SSL:

Set up an SSL Certificate to enable HTTPS. This will encrypt all communication between your devices and recorder.

4. Enable IP Filter:

Enabling your IP filter will prevent everyone, except those with specified IP addresses, from accessing the system.

5. Change ONVIF Password:

On older IP Camera firmware, the ONVIF password does not change when you change the system's credentials. You will need to either update the camera's firmware to the latest revision or manually change the ONVIF password.

6. Forward Only Ports You Need:

- Only forward the HTTP and TCP ports that you need to use. Do not forward a huge range of numbers to the device. Do not DMZ the device's IP address.
- You do not need to forward any ports for individual cameras if they are all connected to a recorder on site; just the NVR is needed.

7. Disable Auto-Login on SmartPSS:

Those using SmartPSS to view their system and on a computer that is used by multiple people should disable auto-login. This adds a layer of security to prevent users without the appropriate credentials from accessing the system.

8. Use a Different Username and Password for SmartPSS:

In the event that your social media, bank, email, etc. account is compromised, you would not want someone collecting those passwords and trying them out on your video surveillance system. Using a different username and password for your security system will make it more difficult for someone to guess their way into your system.

9. Limit Features of Guest Accounts:

If your system is set up for multiple users, ensure that each user only has rights to features and functions they need to use to perform their job.

10. UPnP:

- UPnP will automatically try to forward ports in your router or modem. Normally this would be a good thing. However, if your system automatically forwards the ports and you leave the credentials defaulted, you may end up with unwanted visitors.
- If you manually forwarded the HTTP and TCP ports in your router/modem, this feature should be turned off regardless. Disabling UPnP is recommended when the function is not used in real applications.

11. SNMP:

Disable SNMP if you are not using it. If you are using SNMP, you should do so only temporarily, for tracing and testing purposes only.

12. Multicast:

Multicast is used to share video streams between two recorders. Currently there are no known issues involving Multicast, but if you are not using this feature, deactivation can enhance your network security.

13. Check the Log:

If you suspect that someone has gained unauthorized access to your system, you can check the system log. The system log will show you which IP addresses were used to login to your system and what was accessed.

14. Physically Lock Down the Device:

Ideally, you want to prevent any unauthorized physical access to your system. The best way to achieve this is to install the recorder in a lockbox, locking server rack, or in a room that is behind a lock and key.

15. Connect IP Cameras to the PoE Ports on the Back of an NVR:

Cameras connected to the PoE ports on the back of an NVR are isolated from the outside world and cannot be accessed directly.

16. Isolate NVR and IP Camera Network

The network your NVR and IP camera resides on should not be the same network as your public computer network. This will prevent any visitors or unwanted guests from getting access to the same network the security system needs in order to function properly.

For latest information about Dahua the cybersecurity statement and recommendations, please visit www.dahuasecurity.com.

Privacy Protection Notice

As the device user or data controller, you might collect personal data of others' such as face, fingerprints, car plate number, Email address, phone number, GPS and so on. You need to be in compliance with the local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures include but not limited to: providing clear and visible identification to inform data subject the existence of surveillance area and providing related contact.

About the Manual

- The Manual is for reference only. If there is inconsistency between the Manual and the actual product, the actual product shall prevail.
- We are not liable for any loss caused by the operations that do not comply with the Manual.
- The Manual would be updated according to the latest laws and regulations of related regions. For detailed information, see the paper User's Manual, CD-ROM, QR code or our official website. If there is inconsistency between paper User's Manual and the electronic version, the electronic version shall prevail.
- All the designs and software are subject to change without prior written notice. The product updates might cause some differences between the actual product and the Manual. Please contact the customer service for the latest program and supplementary documentation.
- There still might be deviation in technical data, functions and operations description, or errors in print. If there is any doubt or dispute, please refer to our final explanation.
- Upgrade the reader software or try other mainstream reader software if the Guide (in PDF format) cannot be opened.
- All trademarks, registered trademarks and the company names in the Manual are the properties of their respective owners.
- Please visit our website, contact the supplier or customer service if there is any problem occurred when using the device.

- If there is any uncertainty or controversy, please refer to our final explanation.

1 Product Overview

1.1 Introduction

Time attendance is an attendance device signing by fingerprint and password. The device supports local attendance setup, USB attendance statistical export with no software. Its has simple and neat appearance, suitable for commercial building, shop, factory and etc.

The device mainly support:

- 16 mechanical keys and 2.4 inch LCD.
- Attendance by fingerprint or password.
- Max of 2,000 fingerprints and 1,000 users.
- Max of 100,000 attendance records.
- Internal ring as prompt.
- 24 groups of shift.
- 20 departments.
- Time shift prompt.

Warning:

- Please use a DC 5V 1A adaptor, and work temperature cannot exceed $-10^{\circ}\text{C} \sim +55^{\circ}\text{C}$.
- Please use battery properly to avoid fire, explosion and other dangers.
- Please replace used battery with battery of the same type.
- Do not use power line other than the one specified in local area. Please use it properly within rated specifications.
- Usage must meet SELV requirement, and voltage provided shall meet Limited Power Source by IEC60950-1, subject to label on device.
- Connect product with type-I structure to grid power output plug with grounding protection.
- If you use plug or coupler as cut off device, please make sure the device could be easily operated.

2 Device Installation

2.1 Checklist

No.	Name	Quantity
1	Unit	1
2	Power adaptor	1
3	Power line	1
4	Screw	<ul style="list-style-type: none">• Screw bag*1• Expansion bolt*3
5	Quick Start Guide	1

Chart 2-1

2.2 Panel and Port

Access controller appearance is shown in Figure 2-1 and Figure 2-2.

Figure 2-1

Icon	Note
0~9	Number key for input of number and letter
Esc	Back or exit
Up	Up
Down	Down
OK	Enter or confirm
#	Backspace
Menu/*	Enter main menu or switch input

Chart 2-2

Figure 2-2

2.3 Dimensions

Figure 2-3

2.4 Installation

Time attendance installation is shown in Figure 2-4.

Figure 2-4

Installation steps:

- Step 1. Stick installation map on the surface you are going to install, and dig hole in accordance with hole position on the map. Insert expansion bolt into installation hole.
- Step 2. Fix screw on wall in accordance with the map, leave a space of 2mm~2.5mm between screw and wall.
- Step 3. Plug in power plug, put wire in order to their corresponding areas.
- Step 4. Hang the device on the screw.

3 System Framework

3.1 Framework

System framework is shown in Figure 3-1.

Figure 3-1

3.2 Main Menu

Click , system shows main menu, see Figure 3-2.

Note:

If you have added administrator user, you can enter administrator user ID and password or fingerprint to log in.

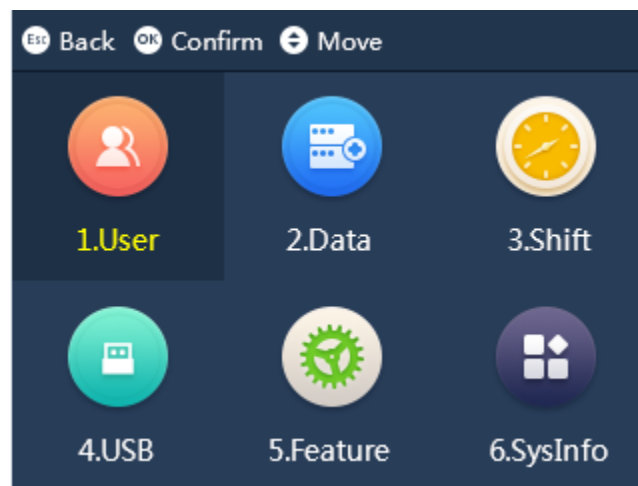

Figure 3-2

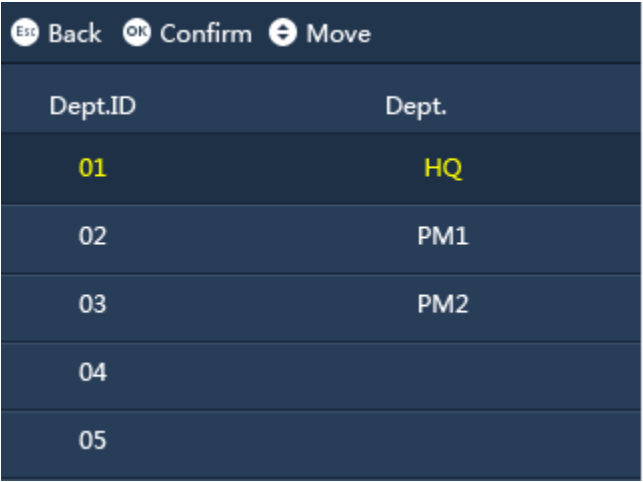

Press  or  to select, click  or directly click number key to enter each function.

3.3 Set Department

The system has 16 departments already, and you can name these departments. After you

name department, new name will be shown in Department parameter created by new user. Unnamed department will not be shown instead.

Select User Management>Edit&Delete Department, click  . Here you can bind department ID to department name, see Figure 3-3.

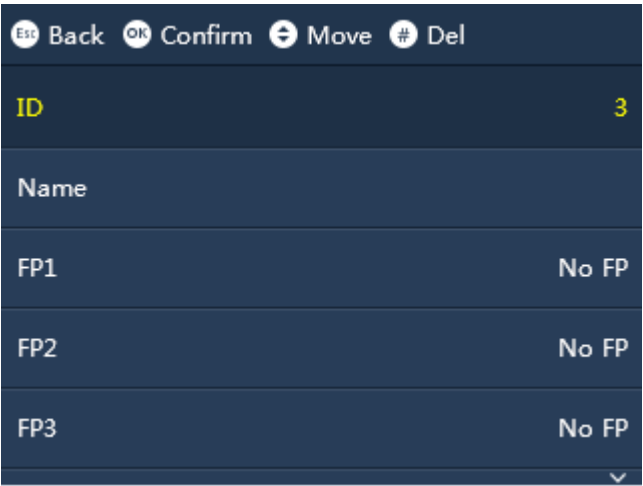

Dept.ID	Dept.
01	HQ
02	PM1
03	PM2
04	
05	

Figure 3-3

3.4 Add User

You can add new user, as well as record new user info, including ID, name, fingerprint, password and etc. A user can register for attendance by fingerprint and password. The system supports up to 1000 users and 5 admin users.

Select User>Add New User, click  . See

ID	
Name	
FP1	No FP
FP2	No FP
FP3	No FP

Figure 3-4

Esc Back OK Confirm ⇄ Move # Del	
PWD	PWD not recorded
Dept	W
Schedule Mode	HQ -shift
User Level	Administrator

Figure 3-5

Note:

- User ID max is 8 digits.
- User name max is 16 digits.
- Input password can be 1-8 digits of number.

3.5 Shift

The system supports 24 shifts. Each shift can set two periods and one overtime shift.

Select Shift>Shift Setup>Shift, click .

Esc Back OK Confirm ⇄ Move # Del	
Shift NO	DutyT1
1	08 : 30 – 12 : 00
2	DutyT2
3	13 : 30 – 17 : 00
4	Overtime Session
5	20 : 00 – 21 : 00
6	

Figure 3-6

Parameter	Note
Duty T1, Duty T2	Set attendance period, as period between sign in and out must meet this period to be normal attendance. Otherwise it is abnormal attendance. The system supports to two periods. If you set two periods, period 1 and 2 must be normal attendance, so the user will be normal attendance.
Overtime Session	Set overtime work session, as sign in and out within this period will be overtime work.

Chart 3-1

3.6 Schedule

The system supports user schedule and department schedule. You can set according to your need.

3.6.1 User Schedule

You can set current month and next month schedule for one user.

Step 1. Select Shift>Schedule Setup>User Schedule, click .

Step 2. Enter user no., to automatically show name and department, click , see Figure 3-7.

Esc Back OK Confirm ↺ Move # Del						
User:1 2017/6 schedules						
Sun	Mon	Tue	Wed	Thu	Fri	Sat
				1 1	2 1	3
4	5 1	6 1	7 1	8 1	9 1	10
11	12 1	13 1	14 1	15 1	16 1	17
18	19 1	20 1	21 1	22 1	23 1	24
25	26 1	27 1	28 1	29 1	30 1	

Figure 3-7

- 1-24 means shift in setup.
- Null and 0 are off duty.
- 25 means business trip.
- 26 means leave.

3.6.2 Department Schedule

Select Department, set loop method of shift for corresponding department.

Step 1. Select Shift>Schedule Setup>Department Schedule, click .

Step 2. Click department set, click , see Figure 3-8.

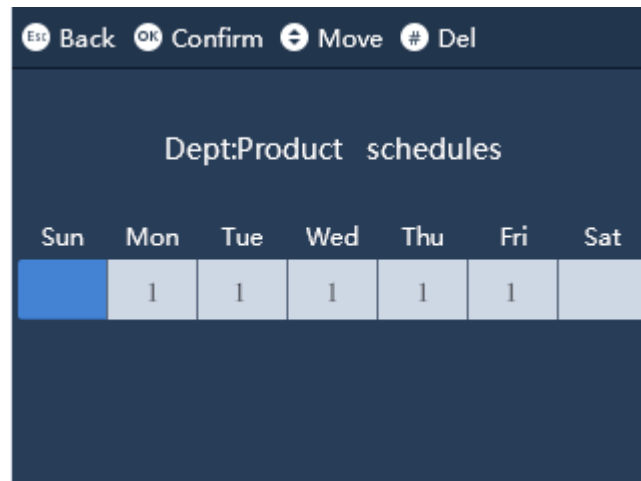

Figure 3-8

- 1-24 means shift in setup.
- Null and 0 are off duty.
- 25 means business trip.
- 26 means leave.

3.7 Attendance

In standby interface, you can register for attendance by password or fingerprint.

- Password attendance

Click number key, to enter user ID, click  and enter password. Click  again to complete.

- Fingerprint attendance

In fingerprint area, press you finger on it.

3.8 Attendance Statistics

Warning

Before you export attendance record, make sure you insert USB disk. During exporting, please do not eject USB disk or operate the system, otherwise the exporting will fail and cause system malfunction.

You can search and export attendance record, while the system stores up to 100,000 records.

After you enter main menu, click  or  to select ATT Statistics, click . Or you can directly click “2” key, see Figure 3-9.

When you select either Export Monthly ATT.log or Export Monthly ATT.Report, click  to export record.

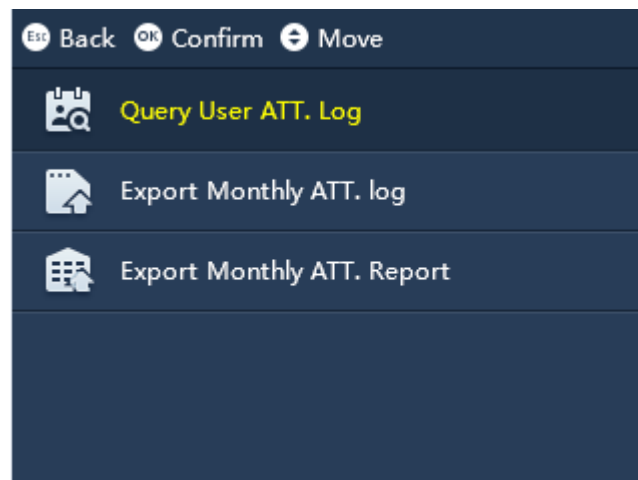

Figure 3-9
