16/24 Ports PoE Full Gigabit Managed Ethernet Switch

User Manual

Preface

The user manual mainly introduces the product shape, product positioning, hardware installation, Web management and other related information.

Illustration

(1)Format of Graphics Interface

Format	Description	
$\langle \rangle$	"<>" means button name , such as "click <confirm> button" .</confirm>	
[]	"[]" means window name, menu name and data table, such as "pop out [New user] window" .	
/	"/" is used to seperate Multi-level menu. Such as [file/new/folder] multi-level menu [file] menu [new] sub-menu [folder] menu option.	

(2) Various Signs

on Improper operation may damage the device or cause data loss.

Supplemental instruction for operation contents.

1 Product Introduction

1.1 Overview

The switch series contain 24 ports switch and 16 ports switch.

The 24 ports PoE full Gigabit managed Ethernet switch(abbreviated to 24P switch), which provide 24* PoE Gigabit downlink Ethernet ports , 4* Gigabit uplink optical fiber ports. The Products support IEEE 802.3 af/at ,support Web layer-2 network management and PoE management. Products are widely used in security surveillance, network engineering projects and so on.

The 16 ports PoE full Gigabit managed Ethernet switch(abbreviated to 16P switch), is similar to 24P switch; only the downlink ports quantity is 16, and the power watts is 320W but the 24P switch's is 450W. The 24P switch as an example to introduce below.

1.2 Product Feature

- provide 24* PoE Gigabit downlink Ethernet ports ,4* Gigabit uplink optical fiber SFP ports ;
- Provide web-based layer 2 network management and PoE management by simple operation;
- Support high-speed data forwarding, very suitable for large flow of video data forwarding in security surveillance;
- Support fast Support fast ring ,Self-healing in 20ms Min;
- Quick Installation, simple operation, convenient for wall/desk/rack installation.

	Packet Forwarding Rate	41.66Mpps	30Mpps	
	MAC Address	16K		
Management	Management	Managemer	nt L2 + PoE	
Drotostion	ESD	6KV/8KV Per:IEC61000-4-2		
Protection	Lighting Protection	6KV Per: IE	C61000-4-5	
	Working Temperature	-10°C~50°C		
Environmental	Storge Temperature	- 40 ℃	~ 85° C	
	Humidity(non- condensing)	0~95%		
	Dimension(LxWxH)	442mm×320)mm×44mm	
Mashania	Material	Sheet	Metal	
wechanical	Color	Bla	ack	
	Weight	4.3	5kg	

Products are subject to change without prior notice.

2 Installation

Anti-counterfeiting label is attached to switch's cover. Product damage caused by unauthorized disassembly is not covered under warranty.

2.1 Shipping List

Please check the following items before installation, if any missing, please contact your local dealer.

Item	Name	Quantity	Unit
1	Device	1	рс
2	AC Power Line	1	Pc
3	Accessory	1	рс
4	User manual	1	рс

2.2 Installation Precautions

To avoid device damage or personal injury by improper use, please observe the following precautions.

2.2.1 Safety Precautions

Instruction

This is level A product, which may cause radio disturbance in living environment. Users may need to take corresponding and effective measures to solve the problem.

- Pull out the power plug before cleaning the switch. Do not use wet cloth nor liquid to wipe or wash the switch;
- Do not leave the switch close to water or wet place so as to prevent water or dampness from entering into the switch;
- Make sure the switch work in a clean environment. Excessive dust may cause electrostatic adsorption, which will affect the equipment life and cause communication failure;
- The switch will work normally under the correct voltage. Please ensure the voltage indicated on the switch corresponds to the power voltage;
- To avoid the danger of electric shock, please do not open the switch case.
- Do not open the switch case even if the switch is powered off;
- The accessories (including but not limited to power cables, etc.), which can be used for the switch only, is prohibited for other applications.

2.2.2 Installation Requirements

The device should work in indoor environment to avoid thunder stroke. It is important to obey the following requirements no matter you install it in the cabinet or on the workbench directly:

- Enough space (larger than 10cm) for air outlet so as to facilitate the heating dissipation; Good ventilation system for cabinets and workbench is preferred;
- Ensure the Cabinet and workbench is sturdy enough to support the switch and it's accessories's weight;
- Cabinet and workbench with good grounding is preferred.

2.2.3 The Requirements of Electromagnetic Environment

When it is working, the switch may be affected by external interference outside the system through the ways of radiation and conduction. Please pay attention to the followings:

- AC power supply is TN system, so it is necessary to use single phase power socket (PE) which can protect ground wire so that the filter circuit can effectively filter out the power grid disturbances;
- The switch should work far away from high-power radio transmitters, radar transmitters, high-frequency devices;
- Use electromagnetic shielding if necessary, such as shielded cable;
- Interface cables should be arranged indoor rather than outdoor to prevent over-voltage or over-current damage to the signal port.

2.3 Installation Way

There are 3 installation ways: rack, workbench and wall-hung installation.

🕂 Caution

Please pull out the power plug before installing or moving the switch. Grounding and anti-lightening can greatly increase the protection level of the switch. please connect the grounding terminal to the earth area by using at least wire 20.

🕑 Instruction

The diagram is for reference only, the products are subject to actual product.

2.3.1 Rack Installation

Installation process:

- (1) Check rack with good grounding and stability;
- (2) Use screws to fit hangers at the device board side;

Figure 2-1 Install hangers diagram

(3) Put the device on the rack's bracket and move the rack along the slot to proper position ;

(4) Use screws to fit the installation hanger at rack's fixed slot, make sure the device is installed at rack's bracket steadily.

Figure 2-2 Install switch to the rack

쭏 Instruction

This product's fixing hangers are just to fix the switch rather than support it. Use brackets under the device (fixed to the rack) to support switch when install the switch to the rack.

2.3.2 Workbench Installation

You can put this product on clean, stable, grounded workbench. The installation procedure as below:

(1) Carefully put the device upside down, clean the grooves on the chassis backplane with soft cloth to make sure there is no oil or dust in it;

(2) Remove the stickers on the foot pad, paste the foot pad in backplane groove;(3) Carefully put the device upright on the workbench.

2.3.3 Wall-hung Installation

You also can put the product on clean, steady vertical wall. Installation procedure is below:

(1) Use the screws to fix the hangers;

Figure 2-3 Hangers installation diagram

(2) Drill holes on the strong position of wall and then drive the rubber plug into the hole;

(3) Drive these screws into the hole for the rack and fix the product by aiming at the rubber plug .

Figure 2-4 Fix the switch on wall

2.4 Cable Connection

2.4.1 Device Connection

Use cross network cable or cross-over cable to connect PC or other device with switch's Ethernet port;

2.4.2 Configuration Cable Connection

If web management, use a network cable to connect the OOB port and the computer'RJ45 port (the OOB port is only used to Web management

default IP:192.168.1.200 name:admin password:admin);

If CLS management, use a console cable (RJ45 to R232 serial port 115200,8,N,1)

to connect the Console port and the computer'serial port(DB9);

as the following figure:

Figure 2-5 Connect configuration cable

2.4.3 Power cable Connection

(1) Connect one side of switch's power cable with the switch's AC power port, and connect the another side with external AC power socket;

(2) Turn on the power, check if switch's AC power LED is on, that means power connected correctly;

(3) Use the power plug snap to jammed the AC Power cable.

Figure 2–6 Connect power cable

3 Function Configuration Guide

3.1 Computer Requirements

- Make sure the management PC has already been installed with Ethernet adapter;
- Use network cable connect Ethernet ports with network card of PC(Except the console port).

3.2 Set Up Network Connection

Instruction

(1) You need to set the IP of the PC and the switch in the same network segment. The default IP address of the switch is 192.168.1.200, network gate is 255.255.255.0.

(2) The port to connect management PC for Web setting must be management VLAN. By default, management VLAN is VLAN 1, and each port of the switch is VLAN1.

(3) If you need to connect the remote network, please make sure the management PC and the router can do the job above.

(4) This product can't assign the IP address for the management PC, you need to set the management static IP by yourself.

3.2.1 Set Static IP for the Management Computer

Operation steps (take Windows XP as sample):

(1) Click <start> to enter the [start] menu, select "control panel". Double click "network connection" icon, double click the "local connection" icon, pop out "local connection status" window.

ieneral Suppor	t	
Connection -		Connected
Status: Duration:		Connected 00:04:10
Speed:		100.0 Mbps
Activity	Sent —	P
Bytes:	7,146	7,917
Properties	Disable	

(2) Click <property> button, enter "local Local Area Connection Properties

connection property" window.

? X

? 🗙

nternet Protocol (TCP/IP) Properties

 $\ensuremath{\mathsf{DNS}}$ server address can be empty or be filled in with the real server address.

3.2.2 Confirm the Network Connection by Ping Command

Operation Steps below:

(1) Click <Start> button to enter [Start] menu, select [Run], pop out the dialog.

Run	? 🔀
-	Type the name of a program, folder, document, or Internet resource, and Windows will open it for you.
Open:	
	OK Cancel Browse

(2) Input "ping 192.168.1.200", click <confirm> button. If there is equipment response show in the pop out dialog, that means network connection succeed, otherwise please check if the network connection is correct.

::>ping 192.168.1.200

3.2.3 Cancel the Proxy Server

If this management PC use proxy server to visit the internet, then you must prohibit the proxy service, following is the operation:

(1) In browser, select [tool/Internet option] enter [Internet option] window.

Address:	ctions). Port: 80 Advanced ver for local addresses

(3) Make sure the "Use proxy server for LAN" option is not selected. If selected, please cancel it and click <yes> button.

The menu bar has the following options: [System Status], [Port Configuration], [VLAN Settings], [QoS management], [link management], [Port Security], [network management], [Network Statistics], [System management], [Exit] and drop-down menu bar of the "language switching function". Click a option to make corresponding setting. The following will explain the function of each option.

3.3 Web Page Configuration Guide

The browser version recommend : IE7 and later, Firefox browser, Chrome, 360 browser (IE7 and later).

3.3.1 Start and Login

This product web default IP address: 192.168.1.200, subnet mask: 255.255.255.0, administrator account: admin, password: admin. After installing the equipment correctly and setting up the computer, open the browser, input the switch default address in the browser address bar: <u>http://192.168.1.200</u>, then press the Enter key, the user login page will show in front of you as follows:

Please follow the steps to check if the switch is installed correctly:

(1) Whether the physical connection of the equipment is correct? Use network cable to connect the product's Ethernet port(except the console port) with managed computer network card, and ensure the link LED of the port is on.

(2) Whether the computer TCP/IP agreement setting is correct? Your computer's IP address must be 192.168.1.x (x range is 1~254 and x can not be 200, otherwise it will conflict with the product IP address 192.168.1.200), subnet mask: 255.255.255.0.

(3) Whether the computer's port VLAN ID is 1?

By default, the management VLAN is VLAN 1, same as each port of switch.

After inputting the correct password, click <Login in>, the browser will display the product Web management page as the picture below:

3.3.3 Common Buttons Introduction

Table 3-1 Web commonly used function buttons introduction

Button	Function
Help	Open the online help page of Settings page to display the help information for current page.
Confirm	Submit the input information and confirm the information the current system provided.
Cancel	Cancel the current configuration input
Return	Return to the previous page
New page	Create a new project of the current page
Select all	Select all the ports of the current page
Refresh	Refresh the current configuration page
Delete all	To delete all configuration items the section selected

3.3.4 The Default Configuration

The following table lists some important default configuration of the switch, all features will be described in details in following chapters. The default configuration is for most cases. Please reconfigure if the default configuration does not match the actual requirements.

Table 3-2 Default Configuration

	Options	Default Configuration		
	Username / password	admin/admin		
System	IP Address	IP Address: 192.168.1.200 Subnet Mask: 255.255.255.0		
	MAC address table aging time	300 Seconds		
	Ports Status	Enable		
	Ports Speed Rate	Auto-negotiation		
	Port duplex mode	Auto-negotiation		
Port	Flow Control	Open		
	Trunking	Port does not converge		
	Port Speed Limitation	No limitation for Speed		
	Port Link Type	Access		
	Management VLAN	VLAN 1		
VLAN	VLAN Function Mode	Port-based VLAN		
Ν	MAC Binding	No Binding		
RSTP	RSTP Function	Close		
Network SNMP		Close		

3.3.5 Web User Timeout

When you have left the Web setting page for a while, the system will log out and return to the Web dialog box due to system time-out. Please log in again if you want to proceed the operation.

🕜 Instruction

Web page login timeout setting defaults to 5 minutes.

3.3.6 Backup System Configuration Information

Click <Backup> button to select the configuration file backup path, click <OK> button to save the current configuration for the computer. The configuration can be restored through the document [* .cfg].

3.3.7 Restoring the Configuration Information

Click <Browse> button, select previous backup file[*.cfg], click <Recover> button. The configuration information stored in the backup file will be restored to the device, the configuration takes effect after the device restarts automatically.

3.3.8 Quit

Click the [Exit] menu item in navigation bar, return to the system status page, the login box will be popuped out automatically till the next click on the page.

4 Web Management 4.1 System Status

The meaning of specification in the page shown as below.

Table 4-1 Specifications description

Specification	Description	
Specification	Description	
Word Time Zone	Display different time zones around the world. For example, select Automatically Adjust Daylight Saving Time in daylight saving time zone.	
Time Configuration	You can select local time or use NTP	
NTP Sserver	NTP is used when all the equipment clocks in the network have to be kept the same so as to ensure the accuracy of the clocks. Enter the correct NTP server's IP address to start the setup.	
System Time	The current time of the device, if you did not get the NTP updated time, then it will start to count from 0:00,1970.	
PC Time	Computer current time	
Device Name	Network identification device used to facilitate the integrated management tools such as SNMP to judge different equipment.	
Contacts	Equipment maintenance personnel's Contact Information	
Contact Address	Equipment maintenance personnel's Contact Information	
MAC Address	Hardware address of the device is unique since it is determined by the length of 48 bits (6 bytes), Hexadecimal digits.	
Hardware, Software Version	Pay attention to software release limit for the hardware version. There are more functions in the updated software version, some of which have new requirements about hardware version.	
Running Time The time period since equipment has been running the device is restarted, the time needed to be recal

Figure 4-1 Port configuration

The specification meaning in this page shown as below Table 4-2 Specification

Specification	Description
Port Enable /	Display the data forwarding of the port. If a port is off, you
Disable	can not forward the data. Enabled by default.
	Display the port configuration's speed rate, including 10M,
	100M, 1000M, auto-negotiation. It defaults to Auto-
Port Speed Rate	negotiation, which means the port can automatically and
	directly connected the device on the other side to negotiate
	the port speed. It defaults to Auto-negotiation mode.
	Display the port configuration's duplex status, including full-
Duplex Mode	duplex mode, half-duplex mode, and auto-negotiation
	mode. It defaults to auto-negotiation mode.
	Choose whether to enable the function of flow control
	When two switches have enabled the function of flow
	control, if one of the two switches has be congested, it will
	send message to the other switch to notify it to temporarily
	stop sending messages or slow down the sending speed.
Flow Control	After receiving the message, the other switch will stop
	sending or slow down the sending speed of messages so as
	to avoid packet loss and ensure normal operation of
	network services.
	By default, the flow control function of the port is enabled.

Configuration direction:

To set the port 1-10 to 100Mbps half duplex mode, and disable the flow control function, please follow these steps:

- To set the port 1-10 to 100Mbps half duplex mode, and disable the flow control function, please follow these steps:
- Enter 1-10 (or click on the box in front of the port) in the range of ports;
- Click the port speed drop-down menu to select 100Mbps;
- Click dual- duplex mode on the drop-down menu to select half-duplex;
- Click flow control the drop-down menu to select the Disable ;
- Click Edit;
- Operation ends.

FInstruction

1-24 port for pluggable module, and port attribute is determined by the selected modules. When selecting 100M optical module, you need to manually set the port rate to 100M mode.

25-26 ports for uplink optical port, at fixed rate of 1000Mbps.

27-28 port is fixed uplink Ethernet ports at a rate of $10/100\,/\,1000Mbps$ adaptive.

4.2.2 Port speed limit

The Equipment provides port-based entry speed limit. Users can restrict every port traffic flows or cancel port flow restrictions . Users can choose a fixed rate, the range is:downlink ports 1 \sim 1000Mbps, uplink port 1 \sim 1000Mbps, Accuracy is 1Mbps. Port restrictions including Unicast packets, Multicast packet and broadcast packet .

In [ports setting/ port speed limit] page , could modify [port speed limit] function setting , as the figure 4-2 show.

Figure 4-2 Port speed limit

The meaning of the parameters on this page are as shown below.

Table 4-3 Parameter description as the following table:

Specification	Description
Bandwidth Settings on / off	Turn on or off the port speed limited, the default is off
Port range	The port that need speed limited
Input rate	The max input rate of each port
Limited type	Port limited type including all Unicast packets, multicast

Configuration direction:

Such as control the rate of 1–5 ports to 50Mbps, limited type is Broadcast packet.

- Turn on ports rate;
- Input 1-5 in port range, input rate is 50, limited type is Broadcast packet.
- Click save;
- Operation finished.

4.3 VLAN Setting

Switch supports two VLAN modes:

(1) Port-based VLAN mode: define VLAN members according to device port. After you specify the port to a VLAN, specified VLAN Packets can be forwarded by the port.

(2) 802.1Q VLAN mode: Defined by IEEE802.1Q protocol. Process the packets by identifying the packets tags.

4.3.1 VLAN Configuration

On [VLAN / Port VLAN] page, you can observe the VLAN settings of all the current port switch and can set several functions such as [Port range], [Link type], [Default VLAN ID], [VLAN forwarding list], [vlan-untagged mark list], as shown in figure 4-3.

							English 💌
	System st	atus Port setting PoE V	LAN QoS	LACP Port security	Network management	Network statistics	System management Exit
VLAN>>Port	VLAN						
Port range							
Link type		Direct connect terminal 💌					
Default VLAN	ID	1 S

Vlan-untagge	d mark list		OK				
	Port	Port mark	Link type	Default VLAN ID	VLAN forwarding lis	t	/lan-untagged mark list
	1	port1	Access	123			
	2	port2	Access	123			
	3	port3	Access	123			
	4	port4	Access	123			
	5	port5	Access	123			

Figure 4-3 VLAN setting

The meaning of the parameters on this page are shown as below.

Table 4-4 Parameter description as the following table:

Parameter	Description
Link Type	Access : port, which is normally used for connecting devices, only belongs to one VLAN. By default, all ports are Access ports. Trunk : port belongs to multiple VLAN and can receive and send multiple VLAN packets. It is normally used to connect network devices.
Default VLAN ID	Enter the ID number which is needed to be divided. (generally 1-4094)
VLAN Forwarding list	VLAN packets can be transferred, other will be discarded.
VLAN untagged mark list	Port forwarded packets can be set in VLAN. Untagged without a tag , but other can not.

Configuration Guide :

Such as if port 1-10 has connected to a switch respectively, it is necessary to divided port 1-10 into VLAN 20.

- Enter 1-10 within the port range(or click on the box in front of the ports);
- Choose Trunk on the menu(Switches connection is generally used with Trunk mode);
- Enter 20 to default VLAN ID;
- Enter 1-10 to VLAN forwarding;
- Enter on VLAN flag list based on actual relationship (the receiving and sending of packets for port is shown in Table 4-5);
- Press Set to save the setting;
- Operation finished.

Instruction

VLAN ID range is 1-4094, VLAN flag list must be in the range of VLAN forwarding list.

Table 4-5 Port processing of transferring and receiving message.

	Received messa	age process	Transferred message
Port Type	Received message without Tag	Received message with Tag	process
Access	The default VLAN ID port for the packet with the corresponding VLAN Tag.	When the VLAN ID and default VLAN ID is the same, receive the packet. Otherwise discard the packet.	Delete message Tag before transferring it.
Trunk	Compare port default VLAN ID to check whether it is allowed by the VLAN ID, if yes, the default message with port VLAN ID corresponding VLAN Tag; if No, discard the packet.	When VLAN ID allowed to pass through in the VLAN ID, then receive the packet. Otherwise discard the packet .	When the VLAN ID and default VLAN ID is the same, remove the tag and send the message. When the VLAN ID and default VLAN ID is different, and is allowed to pass through the port, maintain the original tag and send the message.

The default port VLAN and allowed VLAN must be existed VLAN.

4.3.2 VLAN Forwarding

On[VLAN / VLAN forwarding] page, you can observe the current port VLAN forwarding information, shown in figure 4-4.

						English 🛩
	System sta	itus Port setting F	PoE VLAN QoS LACP Port sec	urity Network management	Network statistics	System management Exit

Figure 4-4 VLAN forwarding

The page parameter description as the table shown.

Table 4-6 Parameter description

Parameter	Description					
VLAN ID	LAN ID needed to be changed					
VLAN Name	Change the VLAN name that need configuration					

Configuration Instruction:

Such as revise VLAN20 name from sales department to financial department.

- Enter 10 to VLAN ID (or click on the box in front of the VID10);
- Enter financial department to VLAN Name;
- Press Revise to save the setting;
- End.

4.4 Trunk Management

4.4.1 Trunk

TRUNK means port convergence, configure the software settings and connect two or more physical ports to become a logical path to increase the bandwidth between switches and network nodes. The bandwidth merge of several ports provides an exclusive high bandwidth several times than an independent port.

On $[{\sf LACP}\/{\sf TRUNK}]$ page, you can observe the current port link convergence information, shown in figure 4-5.

Syst	English em status Port setting PoE VLAN QoS LACP Port security Network management Network statistics System management

LACP Setting	
Load Balance	SRC MAC •
Trunk Group	Trunk-
Trunk Mode	Manual LACP 👻
Port Range	Add Dei
Index	Trunk Group Mode Port Range Port Status
	Refresh Save Help

Figure 4-5 Trunk link

Instruction

Each convergence group supports up to eight ports. Port with the following cases can not be added to an convergence group:

- (1) Port with 802. 1X function;
- (2) The mirror port;
- $(3)\,$ Port with MAC address binding.

Configuration Guide:

Such as connect the switch A's 1-2 ports with switch B's 1-2 ports

- Enable a convergence group in switch A;
- Select 1 and 2 ports;
- Click Save;
- Switch B and Switch A are in consistent procedure;
- End.

Caution

In the same convergence group, the port speed, duplex mode, and basic configuration must be consistent.

STP consistent configuration, including STP ports on / off, STP priority, STP cost, whether to open loop guard and root guard, or edge ports.

QoS configuration is consistent.

VLAN consistent configuration, including permitted VLAN, the default port of VLAN ID. Link type on the ports is consistent.

4.4.2 RSTP

4.4.2.1 RSTP Uses

STP (Spanning Tree Protocol) is established in accordance with IEEE 802. 1D standard. It is developed for the elimination of the data link layer loops in the LAN protocol. Devices running this protocol exchange packets with each other to find loops in the network, and choose to block some certain ports. This will eventually make the loop network structure into a loop-free tree pruning network structure. Thus it prevents packet proliferation and infinite cycling in loop network, avoiding declined processing capacity and receiving same messages repeatly.

STP contains two meanings, narrow meaning of STP is defined in IEEE 802. 1D, board meaning of STP includs IEEE 802. 1D defined STP and various enhanced spanning tree protocol produced on the basis of STP (such as RSTP protocol).

4.4.2.2 STP Basic Concept

(1) The root bridge

Network structure tree must have a root, then STP introduces the concept of root bridge in. Only one root bridge and the root bridge will change when the network topology changes, so the root bridge is not fixed. (2) The path cost

Path cost is a reference value for STP to select a link. By calculating the path cost of STP, STP chooses stronger links to block redundant links and cut the network into a loop-free tree topology.

(3) The port role

Root port: responsible for forwarding data to the root port.

Designated port: responsible for forwarding data to the downstream of network segment or switch port.

Block Port: port suppressed by other's specific ports.

(4) Port status

Forwarding: Forwarding user traffic, only the root port or designated port have this condition.

Learning: The switch builds the MAC address table according to user traffic received (but not forwarding traffic).

Listening: the completion of the root bridge, select the root port and designated ports.

Blocking: Only BPDU is received and processed, no user traffic forwarded. Disabled: consider blocking or link disconnection.

(5) The designated bridges and designated ports

The meaning of designated bridges and designated ports is shown in Table 4-7 below.

Table 4-7 Designated port status

Classification	Designated Bridge	Designated Port
For equipment	Equipment connecting directly with switch and responsible to transfer BPDU message to switch	Port used by designated bridge to transfer BPDU message to switch
For LAN	Responsible to transfer BPDU message to local network segment equipment	Port used by designated bridge to transfer BPDU message to local network segment

4.4.2.3 RSTP Introduction

RSTP (Rapid Spanning Tree Protocol) is an optimized version of STP. It is "fast" because the delay is shortened under certain conditions when a port is selected as the root port and designated port to enter to the forwarding state, thus the time to reaching topology stability is greatly reduced.

Instruction

F

In RSTP, to ensure fast move of root port: the old root port of the device has to stop forwarding data and the upstream designated port has to start forwarding data.

In RSTP, to ensure fast move of designated port: the designated port should be an edge port or a port connected to point to point link. If the designated port is an edge port, the designated port can enter the forwarding state; if designated port is a port connected to point to point link, the device can handshake with the downstream device to give immediate response to enter forwarding state.

On [LACP / RSTP] page can observe the current port $\mbox{ RSTP}$ information on the switch, shown in figure 4-6.

System a	status Port setting PoE	VLAN QoS LACP Port se	curity Network manag	ement <u>Network statistics</u> S	English 💙 System management Exit

5	port5	automatic detection	128	NO	YES

Figure 4-6 RSTP

The meaning of main parameters of the pages as below.

Table 4-8 Parameters description

Parameters	Description
Device priority	As the network bridge priority, network bridge and network bridge MAC address combined as bridge ID, of which minimum bridge ID will become the root network.
Sending message interval	The interval needed to sent a BPDU data packet.
Maximum message lifetime	Means the validity of a BPDU data package of a swtich received from another switch.
Changing port	The forward delay of a switch port status in transition
status delay	status (listening and learning).
Path expenditure	Setting port path cost, only setting when port default path cost on "off" status Port link cost, with port priority and port ID form port ID to compare Value range 1~200000000 "0"means automatic check.
Port priority	The priority of port in network bridge, with port priority and port ID form port ID to compare. Default port priority is 128.
Point to point port	Switch port and switch connected directly, then this port is P2P port, RSTP adopts negotiation mechanism for P2P port so as to achieve quick transformation of port status.
Edge port	The network edge switch generally connects with terminal equipments, such as PC, workstation. To configure these terminal ports to Edge ports can achieve status of transformation port without discarding Learning and forwarding transformation course.
RSTP information	Check RSTP information and port information

Configuration guide:

Enable RSTP function to avoid broadcast storm caused by looped network structure among switch A , switch B and switch C 1–10 port.

- Enable switch A, B, C RSTP function;
- Enter 1-10 within the Port range (or click box front of port) Equipment priority, cycle of sending message, maximum lifetime of information, default port status migration delay;
- Path cost, enter "0" is automatically detected;
- Port priority, choose "128";
- Point to point, choose"yes";
- Edge port, choose "No";
- Click save, operation finished.

Mathematical

After setting RSTP, click "RSTP information" to check root bridge and port information. The port recover time is around 30s by default, click right key to refresh current status.

4.5 Port Security

4.5.1 Statics Address Latch

Statics MAC address is to limit computer operation, the computer with binding

computer MAC and ports can not communicate with other ports, while other computer can do that.

On [Port security/Stastic address lock] page displays switch information of statics address latch, as shown in figure 4-7:

Port security>>Stastic address	s lock		Flow statistics MAC table	
Stastic address lock	Enable Oisable			
MAC address				
VLAN ID				
Port				
		OK Cancel		
N	o.	MAC	VLAN ID	Port

Figure 4-7 Port security

The meaning of main parameters of the pages as below. . Table 4-9 Parameters

	Parameters	Description
		Static MAC address differs from the general dynamic MAC
	MACAddroso	address. Once a static address is added, the address will
	MAC Address	remain in effect until be deleted and free the maximum aging
		time limited.
	VLAN ID	Port-corresponding VLAN ID number
	Port	Select a static MAC address to forward port, you can only
		specify one forwarding port.

Configuration Guidelines:

For example, when binding the port 10 of switch A with switch B, port 1 belongs to VLAN20.

- Enable static address latch function of switch B;
- Enter the MAC address of switch B;
- Enter VLAN ID with 20;
- Enter port with 20;
- Click Save;
- Operation finished.

Caution

This feature is a security mechanism which requires high attention to the settings:

Do not use a multicast address as a enter address;

Do not enter the reserved MAC address, such as local MAC address;

For port which has already been added to an aggregation group, it is not

allowed to set binding function between port and MAC address.

4.5.2 802.1X certificates

IEEE 802.1X certification system adopted the "controllable port" and "uncontrolled ports" logic functions. It can realize the separation of business and certification. After passing certification, the business flow and the certification flow separation, it has no special requirement for the following subsequent packets. Business can be flexible, especially in develop broadband multicast business, it has a lot of advantages. All the business are not restricted by authentication.

802.1X Three Main Parts:

(1) Application supplicant : User and Client which want to get the certification;

(2) authentication server : A typical example for the RADIUS server;

(3) Certification System authenticator : Between the end devices, such as wireless access points, switches, etc We can play at the same time equipment system and authentication server two characters, you can also use the additional authentication server, at the same time support the billing system.

In [port security / 802.1X authentication] page, you can modify / 802.1X authentication function set, as shown in figure 4-8:

	öystem status F	Port setting PoE VLAN QoS LACF	P Port security Network man	agement Network sta	English 💽		
Port security>>8	01.x certification

Figure 4-8 802.1X certificates

Table 4-10 Parameter Description

Specification	Description
802.1X config	On/Off 802.1X certificatin, default is off.
Regularly update the certificaiton	802. 1X The certification cycle time, used to enhance the security of authentication.
Radius Server	Equipment built in the Radius server, if choose internal Radius of service, Applicants will only be used inside the Raduis database users and password. If the use of external Radius server need to fill in the authentication server IP addres and Ports NO. If you need to use the AAA billing system, fill in server setting IP address and Ports No. Or Server setting IP address is Blank.
Authentication server IP address	Radius Remote access authentication server, namely certification authorization use,Set the IP address/domain is device can access to,The default port is 1812.
shared key	For device access authentication server Shared password string.
Service port Settings	Server implementation is the function of billing, set the IP address/domain is equipment can access, Default Ports is1813.
control mode	Compulsory licensing model respectively, and the automatic mode, mandatory unauthorized mode.
Port Control mode	MAC Based.
Max ID list	Scope :1-4096.

Configuration Guide :

EX: Setting port 1-10 to compulsory licensing model, the maximum number of users to 10.

- Start using 802.1x Certification;
- Ports Scope choose1-10, Control mode selection compulsory licensing, maximum number of users input 10;
- Click setting and save;
- Operation finished.

Instruction

(1) Between the applicant and the authentication system using MD5 - inquiry, do not support others;

(2) If the network connection properties without "authentication" option, please select "attachment" -> "management tools" -> "component services" -> "service", set "Wired AutoConfig" to "automatic";

(3) Billing server setup error will also lead the applicant cannot be authenticated. No billing server does not need to set up

(4) All upink or downlink ports must be forced through the authentication, or prohibit the use of certification ", otherwise can't use the remote server, unless you use the internal authenticated server;

(5) When using the remote server, the administrator can access the remote server, be sure to confirm equipment displaying "device address of the gateway set up correctly, if use the domain name the DNS must be set correctly.

4.6 Web Management

4.6.1 SNMP Setting

SNMP is used to ensure the management information transferred between any two points, so that network administrators can easily retrieve information on any node on the network to modify information, fault search, troubleshooting, capacity planning and report generation.

SNMP contains NMS and Agent, of which NMS is a workstation running the server-side program, while Agent is the client software running on net work device. NMS can send request message to Agent, after Agent receive request message from NMS, it starts to read or write and generate response packets and send the response packets back to the NMS.

On the [Network management / SNMP Settings] page, you can enable / disenable the SNMP service ad set the community name, etc as shown in figure 4-9.

System status	Port setting PoE	VLAN QoS L	ACP Port security N	etwork management	Network statistics Syste	English 💌 m management Exit

	Refresh Save Help					

Figure 4-9 SNMP Schematic configuration

The meaning of main parameters of the pages are as below.

Table 4-11 Parameter description

Parameters	Description
SNMP Gateway	Agent send the network IP address from receiver who send abnormal alert.
SNMP version	Only support V1/V2/V3 version.
Read-only community name	A SNMP community named after a string, the group only has permission to operate.
Read-write community name	A SNMP community named after a string, the group has permission to Get and Set operations.

🕂 Caution

Community name: used to define the relationship between the SNMP manager and an SNMP agent. If the community name SNMP packets have not been recognized by the device, the packet is discarded. You can use the standard community name (public or private) or a user-defined group name.

4.6.2 Email Alarm

The device if it is running an event supervision, the supervision sends an alert message to defined mail recipients when something wrong about defining time and some abnormal event occurs,. Supervision also periodically send all log messages to predefined recipients.

On the [Network management / Email alarm] page, you can turn on / off Email alarm service, shown in figure 4-10.

	English 💌
System	status Port setting PoE VLAN QoS LACP Port security Network management Network statistics System management Exit

Figure 4-10 Email alarm

The meanings of main parameters of the pages are as below table.

Table 4-12 Parameters description

Parameters	Description
Mail Server	The host computer's IP address or the host computer that
	provide POP3 mail delivery service to our devices.
Email Accounts	The account name for logging in email server.
E-mail	The password to the account name for logging in amail sover
Password	The password to the account name for logging in email sever.
Recipient	The email address used to inform recipients of abnormal
Address	events.
Email Reply	The email address that can halp achie appartmal quanta
Address	The email address that can help solve abhormal events.
Mail interval	The interval time that regularly send log and weekly reports.
	Parameters Mail Server Email Accounts E-mail Password Recipient Address Email Reply Address Mail interval

Configuration guidelines:

If a switch can not send message out, it should send alarm messages to the specified 163 mailbox.

- Enable Email alarm function;
- Enter your serve smtp. 163. com in the mail server;
- Enter the account ***@163.com in your email account to log in email server;
- Enter email password;
- Receipt email address should input email address of the email receiver ***@163.com;
- Enter recipient or webmaster email in email address, The address is ***@163.com;
- Mail intervals is 12 hours;
- Click Save to finish the procedure.

<u> C</u>aution

Some email service system requires that the "email reply address" should match the "email account"; when sending system test email, the password should be in plain text. The test mail can not be sent if the password is "*".

4.6.3 Port Mirror

Port mirroring refers to copying the monitor port data to a designated monitoring port ,For data analysis and monitoring , The Ethernet Switch support multiple mirroring to one mirroring, which Copy packets from multiple ports to a monitor port, User can also specify the direction of monitored packets, such as only monitor designated ports message. Equipment using port mirroring group way to configure port mirroring, Every port Mirror include monitoring port and be monitored port.

In[network management/ port Mirror] page, which could modify [port Mirror] function setting ,as the figure 4-11 show

Figure 4-13 Traffic statistics

The main parameters of the above illustration are described in the table below.

Table 4-15 The description of the main parameters

Parameters	Description
Receive Frame singlecast	The received address is the number of packets in
Package	the unicast address.
Receive Frame multicast	The received address is the number of packets in
Packeage	the multicast address.
Receive Frame Broadcast	The sent received address is the number of
Package	packets in the broadcast address.
Receive Frame Error	Error package numbers due to various wrong
Package	reasons sent and received by ports.
Send Frame Singlecast	The sent address is the number of packets in the
package	unicast address.
Send Frame Multicast	The sent address is the number of packets in the
Package	multicast address.
Sond Frame Broadcast	The sent address is the number of packets in the
Package	broadcast address
Send Frame Error Package	Error package numbers due to various wrong reasons sent and received by ports.

4.7.2 MAC Address

MAC (Media Access Control) address is the hardware identification of network equipment. Switches could transfer message according to MAC address. MAC address is unique ,which ensures the correct message. Every switch maintains a MAC address table, in which, the MAC address corresponds to switch ports. The switch could decide to filter this data frame or transfer data frame to corresponding port according to MAC address table when the switch receives data frame. MAC address is the basic and premise for data frame fast forwarding.

On [Network statistics /MAC table] page, you could check MAC address of each port, as the figure 4-14 shows:

					English 💌
Syste	em status Port setting PoE VLAN QoS I	LACP Port security Net	twork managemen	t Network statistics	System management Exit
Network statistics>>	MAC table			MAC table	
MAC table inqury					
Inquiry by physical po	nt				
Inquiry by MAC addres	ss type All type				
		Inquiry			
No.	Source address	VLAN ID	Туре	Port	Process mode
1	20:4E:7F:89:DB:97	1	Dynamic	28	forward
2	00:24:8C:95:AD:4C	1	Dynamic	28	forward
3	50:E5:49:AF:46:97	1	Dynamic	28	forward
4	54:04:A6:D5:BB:6F	1	Dynamic	28	forward
5	14:DA:E9:93:02:64	1	Dynamic	28	forward
6	00:0C:29:29:D2:60	1	Dynamic	28	forward
7	00:1F:29:9A:88:E6	1	Dynamic	28	forward

Figure 4-14 MAC address table

The main parameter description are shown as the table.

Table 4-16 Main parameter

Parameter	Description
Inquiry by physical port	Enter detailed physical MAC address to check.
Inquiry by MAC address type	MAC address type consists of static MAC address and dynamic MAC address.

Caution

Multicast MAC address table is displayed in IGMP snooping table, all these address tables are unicast addresses, The permanent static address is configured in static MAC address port table. You need to modify corresponding entries when the port changes. The aging time of MAC address is 300s, after port disconnected, the upper port operation procedures clear all correspond port entries.

4.8 System Management

481 IP Address

IP address is a 32 bit length address connected on Internet equipment. IP address consist of two parts: Network-Id and Host-Id.

On this page, you can check the IP address and etc for this device, just shown in figure 4-15.

System management	t>>IP address	
Access	Static IP Opnamic IP	
IP address	192.168.1.184	
Subnet mask	255.255.255.0	
Default gateway	192.168.1.1	
DNS address	202.96.134.133	

(1) We could set IP address range as 192.168.x.x,172.[16-31].x.x or 10.x.x.x;

(2) Please fill in correct DNS address when using it for NTP and EMAIL.

4.8.2 User Management

On this page, you could modify or add one user with password . as figure 4-16.

									English	~
Syst	iem status Port se	tting PoE	VLAN QoS LACF	P Port security	Network manage	gement Netw	ork statistics	System ma	nagement	Exit
System manageme	nt>>User manageme	ent								
User index	1	*								
Visit level										
User name	admin									
Input password	•••••									
Confirm password	*******									
			Refr	esh Save	Help					

Figure 4-16 User management

The description of main parameter as the table shown.

Table 4-17 Main parameter

Parameter	Description
	User index indicates the group of users, There are three user
User Index	indexes in drop down table.
Visit Loval	Administrator: view and set all configuration.
VISIT Level	User: some functions.
	The identification of visitors. The combination of alphabet and
User Name	Chinese character.
Input Password	Visitor password, the combination of alphabet and Chinese
Input Fassword	character.
Confirm	Password confirmed
Password	

Instruction

Users enjoy the permission rights of all functions except for "power configuration", delete all logs", "update software" and "restore factory setting".

Caution

(1) If you forget your user name and password, please contact technical support in order to get help.

(2) Set the same user name, only the top user / password could work.

(3) Web supports up to one administrator and two ordinary users,

administrators can not be deleted.

4.8.3 Log Information

The log function allows users to access system operation, When this function is enabled, corresponding events are recorded to the log:

- (1) System restart;
- (2) Port Link Down/UP;
- (3) Power supply status;
- (4) login information;
- (5) Boardcast storm;
- (6) System action and operation record;
- (7) NTP time synchronization information;
- (8) Other system information.

On [System management/ Log information] page, you could check the time and type of event, as shown in the figure 4-17.

Figure 4-17 Log information

The received frame statistics and transmit frame statistics are shown as the table .

Table 4-18 Part of error package description

Parameter	Description		
Log Sever Address	The server address receiving log information.		
	There are eight optional levels: error information,		
Depard lawaat	notification information to be logged, information in need of		
Record lowest	quick reaction, serious information, information that can		
grade	not be used in system, normal but important information,		
	information in debug, warning information.		
Download All	Developed all information (Formation)		
Information	Download an information (Format. cig).		
Delete All	Delated all information		
Information	Deleted all information.		

4.8.4 File Management

On [System management/ File management] page, You could check configure document, software upgrade, restore factory setting and reboot system as shown in the figure 4-18.

System stati	us Port setting PoE VL	AN QoS LACP Port se	curity Network manageme	nt Network statistics	English 💌 System management Exit
System management>>File r	nanagement				
Configuration files					
Configuration backup	Backup				
Configuration recover	Recover		Browse		
Software update					
Select update file	Update		Browse		
Restore factory defaults					
Restore factory defaults	ОК				
System reboot					
System reboot	OK				
			Help		

Figure 4-18 Document management

The main parameter descriptions are shown as the following table.

Table 4-19 Main parameter description

Parameter	Description
Configuration File	Backup switch configuration (File format.cfg); Select configuration file you want to restore and restore all configuration of switch (File format.cfg).
Software Update	Select the software you want to upgrade.
Restore Factory Defaults	Recover all configuration except for IP address, user name and password.
System Reboot	Restart system and return to system status page.

\rm Caution

(1) Please keep the switch energized during the upgrade process and do not off the power.

(2) Please save configuration before rebooting, otherwise the unsaved configuration information will lose.

4.9 PoE Management

On PoE management page, you could turn on/off PoE function, set input power, maximum overload, reservation power etc, as shown in figure 4-19.

	System statu	is Port setting PoE VLAN QoS LACP	Port security Network manageme	nt Network statistics	System mana	English 💙 Igement Exit
PoE						
Power settin	g (Be careful for	modification)				
Power provid	led 360 W	Overload limit 5 %	Reserved rate 15 %	ОК		
Power status	5					
Consumed	W	Remaining NaN W	Reserved 54 W	Provided	360 W	
Port status a	and control					
Port range		Priority Low	Power limit 25 W (0-99	W) ON	OFF	ОК
	Dent		C		Setting	
	Port	POLIMALK	Consumed (W)	Power limit (W)	Priority	Port status
	1	port1		25	Low	open
	2	port2		30	Low	open
	3	port3		30	Low	open
	4	port4		30	Low	open
	5	port5		30	Low	open

Figure 4-19 PoE management

(1) Please do not modify the input power, if the setting value is more than the actual power of the built-in power, there will be a risk of overload burning. If the setting value is less than the actual power for the built-in power supply, it can not be fully allocated out.
(2) Each port of the product is to provide maximum output power of 30W, if user setting exceeds 30W, 30W is still the maximum power output only.

The information of main parameter description as the table shown. Table 4-20 Main parameter description

Parameter	Description
Power	Determined by built-in power supply module and can not
provided	exceed maximum power supply.
Overload limit	Built-in power supply allows overload rate. Setting range 0% ~10%, default 5%, if actual output power is overlarge, it will cause built-in power supply exceeds the set value, the system will power off ports with lower priority.
Reserved rate	Reservation power can not be used for distribution, but can be used for PD consumption caused by overload change, The default is 15% of the total power. The larger this number, the smaller the risk of system overload, So the usable power for distribution and PD quantity become less; on the contrary, the more the number of PD access, the greater risk of system overload.
Consumed	Actual output total power.
Remaining	Means power that could be used for redistribution. surplus= input - actual output - reservation. Please note that when insert a new PD equipment, the power will be distributed based on the detected PD power level instead of the actual power of inserted PD, for example : when surplus power is 20W, the system still can not distribute power nor supply power if insert power level of PD is 25.5W and the actual power only requires 10W.
Reserved	Used for PD consumption with overload changes, It stems from the set menu "input power rate * reserve power".
Provided	Total power for system setting, It stems from the set menu "input power".
Priority	There have three level of "low", "middle", "high" for port power supply priority. when the system is overloaded, the power supply of the port with low priority will be turned off firstly.
Power limit	Set the output power limit for single port., the port will power off when actual output power exceeds limit.
On/Off	Power on the port POE function / power off the port POE
Setting	Sett port priority, maximum power consumption.

4.10 QoS Management

4.10.1 QoS setting

On the QoS management/QoS Settings page, you can modify / 802.1 P QoS function setting, as shown in figure 4-20.

							English 💌
Syste	m status Port	setting PoE VLAN	QoS LACP Port sec	urity Network m	anagement Network	statistics Systen	n management Exi
QoS>>QoS setting							
QoS setting	0	Enable 🔘 Disable					
802.1p QoS setting	802.1p QoS setting O Enable Disable						
802.1p mark range							
Priority	0	▼ 0	K				
802.1pMark	Priority	802.1pMark	Priority	802.1pMark	Priority	802.1pMark	Priority
0	0	1	1	2	2	3	3
4	4	5	5	6	6	7	7
Refresh Save Help							

Figure 4-20 802.1P QoS

The meaning of parameters in the page is shown in the following table.

Table 4-21 Main Parameter

Parameter	Discription
QoS Setting	On/Off OoS function Default is Off
on/Off	
802. 1P QoS	Traffic priority, 802. 1P define in 8 Priority, the highest
config	priority is 7, then to 6 , 5 , 4 , 3 , 2 , 1 , 0
802. 1P Scope	lidentify scopes is 0 , 1 , 2 , 3 , 4 , 5 , 6 , 7 , Total 8 ID, 0
	As the default value, The absence of other priority value set
	automatically enabled
Priority	Priority for 0 queue to queue, 7 , 7 queue as the highest
	priority queue

Configuration guide:

Example: Set ting ID 6, 7 to Lowest queue.

- Turn on QoS setting & 802.1P QoS Setting;
- 802.1P ID scope Input 6-7, Priorty set line 0;
- Click Settings, then save;
- End of operation.

The arrangement of equipment use for the WRR queue scheduling, priority mode for the relative priority.Equipment in the default setting priority 0 and 1 is mapped to the first priority queue. Namely the lowest priority queue.Priority 2 and 3 mapped to the second priority queue.4 and 5 priority priority mapping to the third queue.6 and 7 mapped to the highest priority priority queue is the highest priority queue.

4.10.2 DSCP/TOS QoS

[QoS Setting/ DSCP/TOS QoS] Interface, can modify the setting [DSCP/TOS QoS], figure 4-21

							English 💌
Syst	em status Port sett	ing PoE VLAN	QoS LACP Port sec	curity Network m	anagement Network	statistics Systen	n management Exit
QoS>>DSCP/TOS Qo	S						
DSCP/TOS QoS setti	ng 🛛 🛛 Ena	able 🔎 Disable					
DSCP mark range							
DSCP priority	0	 Set 	t				
DSCPMark	Priority	DSCPMark	Priority	DSCPMark	Priority	DSCPMark	Priority
0	0	1	0	2	0	3	0
4	0	5	0	6	0	7	0
8	1	9	1	10	1	11	1
12	1	13	1	14	1	15	1
16	2	17	2	18	2	19	2
20	2	21	2	22	2	23	2
24	3	25	3	26	3	27	3

Figure 4-21 DSCP/TOS QoS

The meaning of parameters in the page is shown in the following table Table 4-22 Main Parameter Description

Parameter	Description		
DSCP/TOS QoS	ON/OFF DSCP/TOS QoS , Default is Off		
DSCP Scope	TOS Identifies scope, Scope is 0-63		
DSCP Priorty TOS Priority, priority for zero queue to queue, 7 7 queu priority			

Configuration guide:

For example the id 0-16 is set to the highest queue.

- Start using DSCP/TOS QoS configuration;
- In DSCP ID scope Input 1-10, DSCP Priority Choose the seventh queue priority;
- Click Setting and save
- End of operation.

🕑 Instruction

When start using 802.1P &DSCP/TOS QoS at the same time, DSCP/TOS QoS Priority First $_{\circ}$

Environment protection

This product design is environmental friendly and the product should be stored, used and dicarded in accordance with relevant national legal / regulatory requirements.
